

Preparing data for supervised fine-tuning Part 2: Advanced data strategies

From: AWS Machine Learning

Source: AWS Machine Learning

The Brief

****What shipped****

AWS Machine Learning released the second part of a blog series on data preparation for supervised fine-tuning.

****Capabilities****

The blog covers methods for evaluating data readiness with learning curves, selecting high-value data subsets, augmenting data with synthetic and distilled examples, and mixing data sources to prevent catastrophic forgetting. These strategies aim to enhance the effectiveness of supervised fine-tuning.

****Availability****

The content is available on the AWS Machine Learning blog and can be accessed online. No pricing or access tiers are mentioned.

****Why it matters****

This information provides practitioners with advanced strategies to improve model performance through better data preparation, potentially leading to more efficient and effective fine-tuning processes.

****Caveats****

The claims made in the blog are not verified by empirical data or benchmarks. Specific examples or case studies illustrating these advanced strategies are not provided.
