GPT-6 Astra on robot arms

From: Hacker News

Source: Hacker News

The Brief

****What shipped****

GPT-6 Astra on robot arms has been shipped by an unspecified AI lab.

****Capabilities****

The GPT-6 Astra model reportedly supports multimodal inputs, a context length of up to 32,000 tokens, and has achieved a score of 95% on the MMLU benchmark. The speed of processing is noted to be significantly faster than previous models, though specific figures are not provided.

****Availability****

The model is available through an API, but details on pricing, tiers, or regional availability are not stated.

****Why it matters****

This release introduces advanced multimodal capabilities that facilitate more complex interactions and applications in robotics, potentially lowering development costs for companies building AI-integrated robotic systems.

****Caveats****

Claims regarding performance and capabilities are unverified, and there is limited access to the model's specifics. The announcement lacks detailed evidence supporting the benchmark scores provided.
